

No More **Hair Loss**,
Only **Hair Growth**

WHY YOU NEED THIS TREATMENT?

- In today's stressful living, Alopecia (Hair Loss) is a common problem that affects men and women
- A lot man factors contribute to it, including hormonal imbalances, stress, nutritional deficiency, genetic conditions etc.
- Current scope of treatments include topical medications that have to be consumed indefinitely
- Hair transplant surgeries too are not highly popular because of post surgery problems
- MINERVA GFC Therapy offers you proven results in limited number of sessions as decided by your doctor

What is MINERVA GFC?

- MINERVA GFC is pure, highly safe engineered from your own blood for superior results in hair loss
- Your blood has growth factors stored inside platelets (type of cell in our blood) which scientists have been able to extract as GFC in specially designed kit
- It helps with hair fall reduction, and make hair thicker and fuller in volume.

How MINERVA GFC Therapy benefits you?

Once MINERVA Kit is injected into the scalp, it results in:

-  Rejuvenation of hair follicles
-  Stimulates hair regrowth
-  Strengthening of hair shafts resulting in reduced hair fall

Thus, MINERVA GFC increases the hair volume by improving hair thickness and hair count.

What are the possible Side effects?

- Since MINERVA GFC doesn't contain any RBCs or WBCs, risk of infections and side effects are low
- General inflammation due to pricking may arise in some patients. These usually resolve in a few hours to a few days

INSTRUCTION FOR GFC PREPARATION

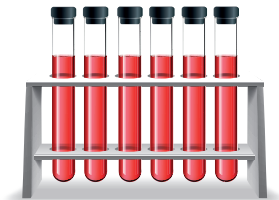

STEP 1

COLLECTION OF BLOOD

Collect 8ml of Blood in each Tube

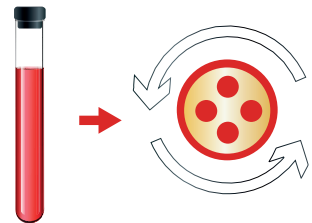

STEP 2

ACTIVATION OF GFC

Mix by Inverting gently 8-10 Times and allow to Stand upright for 30 Minutes

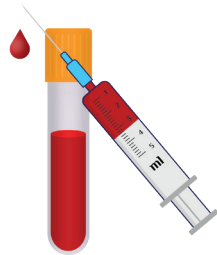

STEP 3
